CLAIMS

1. A device for cleaning a substrate such as a fabric comprising:
 - 5 (a) A reservoir for storing a fabric cleaning fluid,
 - (b) a scrubbing member for scrubbing the fabric, the scrubbing member in fluid communication with the reservoir,
 - (c) the scrubbing member comprising one or more dispensing orifices,
 - (d) a movable platform for forcing said cleaning fluid to exit from the reservoir to the scubber member, where it is exposed on an exterior portion of the scrubber member via said dispensing orifices, for cleaning purposes, *characterised in that the Scrubbing member comprises a coarse mesh structure.*
- 10 2. A device according to claim 1 wherein the platform comprises a wall or base portion of the reservoir and sliding the platform within the reservoir, progressively compresses the cleaning composition which is thereby forced to exit the reservoir and flow to the scrubbing means.
- 15 3. A device according to any preceding claim in which the reservoir is in fluid communication with the scrubbing means by way of an exit orifice or orifices.
- 20 4. A device according to any preceding claim in which the reservoir is refillable with cleaning fluid or components thereof, by a user.
- 25 5. A device according to any preceding claim in which the reservoir has a removable portion e.g. end cap and optionally scrubbing means for refilling purposes.
